Background - Field of Invention

This invention relates to dress forms and mannequins that display clothing.

Background - Description of Prior Art

Prior to the invention described herein, collectors of doll clothing did not have a product to hold, contain and display an entire ensemble as it was originally produced, packaged and sold, including accessories such as shoes, handbags, gloves, jewelry and hats. Dress forms previously available only displayed the article of clothing and had no portion or part of the form useable or suitable for holding, containing and displaying the accessories to the ensemble.

Although the accessories to an ensemble or outfit are coordinated by material, shape, style and color, and are especially designed to go with and accompany the clothing of an ensemble, no means has previously been available to display these accessories along with the items of clothing. Therefore, the accessories have ended-up stored, usually in plastic bags or left sitting loose near the clothing display and subject to being lost or misplaced. Since many of these ensembles are costly, ranging from \$25 to over \$2,000 each, this product fills the need both functionally and economically of doll fashion collectors.

No dress form or mannequin has been found that can hold, contain and display the ensemble accessories along with the ensemble clothing.

Most dress forms such as Patent No. 3,865,284 have a purpose of adjusting to duplicate a size of human form and relate to making clothes rather than displaying clothing.

Garment Display Device, Patent No. 4,792,071 comprises a variable configuration clothes hanger with shelf for accessories.

B

Do NOT ENTER SUB-SPEC - BNY

Other clothing mannequins such as Patent Nos. 5,310,099; 5,480,074; 5,022,569; and 5,409,150 do not include a way to hold, contain nor display accessories to an ensemble.

With the advent and growth of doll fashion collecting, especially vintage ensembles, came the need to keep and display them together as they were originally produced, packaged and sold. This is reinforced by the fact that the small accessories are usually the most rare and valuable part of the ensemble.

Objects and Advantages

Accordingly, the object of my invention is to provide a mannequin in the shape of a dress form that has an incorporated means of holding and self-containing an entire ensemble of doll fashions as they were originally produced, packaged, and sold. Accessories include but are not limited to, shoes, handbags, gloves, jewelry and hats. An advantage of my invention is that accessories of an ensemble are not as likely to become separated from the clothing of ensemble, nor as likely to be lost or misplaced. The flat tray base holds these accessories and the rim around the upper edge of the tray, contains the accessories.

Description

A typical embodiment of this invention is illustrated in Fig. 1. Fig. 1 shows a Perspective Front View of the mannequin. There are 3 (three) main parts of the mannequin: #1 Torso, #2 Stem and #3 Tray Base. #1 Torso is permanently connected to the #2 Stem. #2 Stem connects the #1 Torso to the #3 Tray Base. #1 Torso has a slightly elongated neck, otherwise a normal human shape ending at the bottom hip line. #2 Stem is cylindrical and tapers from bottom to top. #2 Stem is permanently connected to the bottom of the #1 Torso at the #7 upper End of the Stem and removable from the #6 Stem Holder that is a part of the #3 Tray Base. #3 Tray Base is comprised of a #4 Rim on Tray Base that is raised or Elevated from and attached to the outer edge of #5 Horizontal Plate of Tray Base. #5 Horizontal Plate of Tray Base is the flat bottom surface of #3 Tray Base. #6 Stem Holder is a part of #3 Tray Base. #6 Stem Holder is cylindrical and open on both top and bottom ends. #3 Tray Base is solid not hollow.

Fig 2 shows a top view of #3 Tray Base, #4 Rim on Tray Base, #5 Horizontal Plate of Tray Base is shown open at top as well as at bottom.

Fig 3 shows a Front Sectional View of the mannequin with addition of #8 Lower End of the Stem which is removable from Tray Base. #8 Lower End of Stem is slightly smaller than opening of #6 Stem Holder of Tray Base.

Fig. 4 shows a View of Fig 3 with #3 Tray Base released from #2 Stem

Fig 5 shows a Side Sectional View of the Mannequin.

Operation of Invention

Fig 1 shows #1 Torso suitable for holding, shaping, supporting and displaying clothing such as dresses, gowns, jackets, blouses, sweaters and skirts. The mannequin #1 Torso can be dressed by garments being placed, in a normal manner, on #1 Torso from the top over the neck and shoulders, or if too small to fit, they can be pulled into place from the #8 Lower End of Stem after it has been removed, as shown in Fig 4, from #6 Stem Holder contained in #3 Tray Base. #2 Stem is then placed back in #6 Stem Holder of Tray Base. Thus #1 Torso and the items or articles of clothing are supported. A hat can be placed on the top of the neck of #1 Torso for display.

The accessories to an ensemble, such as shoes, handbags, gloves and jewelry are placed, arranged and held contained and displayed in the #3 Tray Base on the

Flat #5 Horizontal Plate of Tray Base. Accessories are contained by #4 Rim on the Tray Base.

Handbags can lean against #6 Stem Holder of Tray Base and #2 Stem for upright support giving better visibility of there accessories. Long accessories such as long gloves are accommodated by being placed behind #6 Stem Holder of Tray Base leaving the front area of #5 Horizontal Plate of Tray Base free for displaying smaller items.

Conclusion, Ramifications & Scope

Thus the reader will see that the mannequin including a properly located Tray Base to hold the mannequin upright; as well as; hold, contain and display accessories along with the clothing from an ensemble as they were originally produced, packaged and sold is a useful and unique product.

This invention can be made in different sizes to accommodate various sizes of doll clothes. Torso, Stem and Tray Base can be made in various shapes.

Ideally the preferred embodiment is to make the mannequin from molded parts thru vaccum forming, injection molding or blow molding. The favored form is from 5 styrene plastic parts as shown in Fig 5, as follows: #1 Torso snaps or is glued to the # 2 Stem. #3 Tray Base is a separate piece.

This invention can be made of many materials including plastic, rubber, wood, metal and combinations of the foregoing, to name a few.

Although the description above contains many specificities, these should not be construed as limiting the scope of the invention but merely providing illustrations of some of the presently preferred embodiments of this invention. For example the mannequin Torso can be made in the shape of a female, male or child. The Tray Base can be different shapes.

Thus the scope of the invention should be determined by the claims and their legal equivalents, rather than by the examples given.
